Subject Index

Acetylcholine,
cell signalling in the lens 637
neurotransmitter in lacrimal gland 448
Achromatic contrast, large monopolar cells, fly eye 166
Acuity, fly photoreceptor design 180
Adrenergic agonists,
and lacrimal gland secretion 453
effect on inositol phosphates 470 – 474
effect on protein kinase C 470 – 474
effect on calcium 470 – 474
Alkylating agents, mode of action 484
Allergic conjunctivitis, use of immunophilin ligands 498 – 500
Amacrine
AII cells,
dopaminergic modulation 313
synaptic connectivity 308
cell coupling 336 – 343
Angiogenesis, in retina 373
Anterior
chamber-associated immune deviation (ACAID) 566
segment of eye,
anatomical boundaries 556
immunocompetent cells in 567 – 583
immune privilege 566,583
Antigen presenting cells, structure and function 558
Antimetabolites, mode of action 484
Antioxidant enzymes 106 – 108
Antioxidants 101 – 117
ascorbate 113
non-enzymatic 108
metallothionein 108
zinc 109 – 112
protection against light damage 19
β-carotene 114
vitamin E 113
Aqueous humor, and growth factors 536
Astrocyte
interactions 370,381
migration 370
Astrocytes,
role in transport 377
role in vasodilatation 377
type 1, sodium channel expression 380

Biochemical measures, of retinal light damage 15
Bipolar cell coupling 332
Blood – retinal barrier 374
Blowfly compound eye 166

Calcitonin gene-related peptide, in lacrimal gland 450
Calcium,
and cataract 623
and cell communication 629
and cell signalling 631
cell signalling agonists in lens 639
channel antagonists,
clinical effects, eye 599
mechanisms of action 598
pharmacological effects 599
potential in glaucoma 601
side effects 599
tissue selectivity 598
types 597
channels 596
receptor-operated 596
voltage-operated 596
control in lens cell 625
effect on lens transparency 628
effect on lens structure 628
regulatory mechanisms 626
role in cell 596
Calpain 629
Cataract, and calcium 623
Cholinergic agonists,
and lacrimal gland secretion 453
effect on calcium 453 – 462
effect on inositol phosphates 453 – 462
effect on protein kinase C 462 – 465
Choriocapillaris 258
Choroidal
vascular distribution, cat 264
vasculature 257 – 269
choriocapillaris 258

large vessels, outer layer 258
medial vessels 258
vessels,
anastomoses 264 – 267
segmental supply, clinical significance 267
Ciliary body, immunocompetent cells in 581
Ciliary processes, vasculature 661 – 675
Cone photoreceptors, effect of *rd* mutation in mice 35
Contrast coding, fly eye 170 – 180
Cornea,
immunocompetent cells in 568
synthetic 606
Corneal
epithelial
migration, growth factor stimulation 524
wound healing 525 – 529
epithelium,
and growth factor receptors 518
and growth factors 518 – 525
cell origins 515 – 517
circadian rhythm of cell growth 517
macrophages, release of growth factors 522
nerves, release of growth factors 521
transplantation 605
use of cyclosporine 493 – 498
transplants 568
Corticosteroids, mode of action 480 – 483
Crystallin gene transcription, regulation 424 – 428
Crystallins,
and small heat shock proteins (hsps) 413
functional aspects 412
invertebrate 423
lens 408 – 424
structural aspects 409
taxon-specific 421
Cyclic
AMP metabolism 42
GMP metabolism 43
GMP phosphodiesterase 43
biosynthesis 44
Cyclosporine 484
use in allergic conjunctivitis 500
use in corneal transplantation 493 – 498
use in refractory uveitis 490
Cytoskeleton,
components of 125
lens 407
of RPE cells 138
Cytotoxic agents, mode of action 483

Damaging light, spectral characteristics 5
Defensins 509
Degenerative retinal disorders 65
viral-induced 88 – 92
Dendritic cells, structure and function 558
Dopaminergic modulation, AII amacrine cells 313

Electroretinography 13
Enkephalins, in lacrimal gland 450
Eosinophils, structure and function 566
Epidermal growth factors 509
Extrinsic membrane proteins, lens tissue 406
Eyes, evolution of 392

Fibroblast growth
factor,
and lens epithelium 530
factors 510
Fibronectin expression 372

G proteins, in lacrimal gland 455,470
Ganglion cell coupling 344
Gene expression, stimulation by retinoic acid 232
Glaucoma,
an optic neuropathy 594
and vascular diseases 595
caused by intraocular pressure 594
therapeutic use of calcium channel antagonists 601
Glaucomatous progression 595
Glia
– glia interactions 382
limitans formation 374
Glial
cell biology 359
cells, mammalian retina 358
wrappings, formation 378
Growth factor receptors,
in corneal epithelium 518
in lens epithelium 534

Growth factors,
and corneal epithelium 518 – 525
effects on lens epithelium 530 – 540
in aqueous humor 536
in corneal epithelial basement membrane 520
in tears 521
in vitreous humor 537
release from corneal nerves 521
released by corneal macrophages 522
stimulation of corneal epithelial migration 524
stimulation of ocular epithelium 509 – 514
synthesized by lens 535

Histaminergic transmission, fly eye 184
Horizontal cell
axons, mammalian 324
coupling 318
dendrites, mammalian 321

Immune privilege, anterior segment 566,583
Immunocompetent cells,
in anterior segment of eye 568 – 583
in ciliary body 581
in cornea 568
in iris 577
in lens 582
in limbus 572
in trabecular meshwork 574
Immunocytochemical examination, of rd mouse retina 38
Immunophilin ligands,
mode of action 484 – 486
use in uveitis 486
use in corneal transplantation 493 – 498
use in allergic conjunctivits 498 – 500
Immunosuppressive agents, mode of action 480 – 484
Inherited retinal degeneration, animal model 32
Inositol phosphate production, in lacrimal gland 456,471
Insulin-like growth factors 511
Intermediate filaments, cytoskeleton of RPE cells 126 – 129
Interphotoreceptor
matrix 69
retinoid-binding protein (IRBP) 67
uveitis 84
functions 69
pathology 80
Invertebrate crystallins 423
Iridial ciliary processes 658 – 661
Iris,
capillary network 655 – 658
immunocompetent cells in 577
vasculature 654

Junctional coupling 302

Keratins, in retinal pigment epithelium 129 – 136
Keratoplasty, penetrating 605
Keratoprosthesis
design 606
materials 611
polymethylmethacrylate 611
surgical techniques 608

Lacrimal gland,
acetylcholine 448
calcitonin gene-related peptide 450
calcium 453 – 462,470 – 474
electrolyte secretion 446
enkephalins 450
functional anatomy 445
G proteins 455,470
innervation 448
inositol phosphates 453 – 462,470 – 474
neuropeptide-Y 450
norepinephrine 448
protein kinase C 462 – 465,470 – 474
protein synthesis 446
stimuli of protein secretion 451
stimuli of electrolyte secretion 452
substance P 450
vasoactive intestinal polypeptide 448,453
Large monopolar cells,
and achromatic contrast, fly eye 166
histaminergic transmission, fly eye 184
signal transmission, fly eye 183
Lens,
accomodation 400
cells, differentiation 396
crystallins 408
functional aspects 412

structural aspects 409–412
cytoskeleton 407
development, disturbance 396
epithelial cells, and growth factors 530–540
epithelium, synthesis of growth factors 535
evolution of refraction 397
evolution of transparency 397
extrinsic membrane proteins 406
growth,
and leukotrienes 539
and prostaglandins 539
stimulation mechanisms 538
immunocompetent cells in 582
major intrinsic protein (MIP) 403
molecular development 393–397
of vertebrate eye 392
phosphoinositide cycle 631
pigmentation 400
plasma membrane–cytoskeleton complex 402
protein components 405
protein metabolism 399
protein recruitment 400
shape 393
structure, effect of calcium 628
transparency, effect of calcium 628
Leukotrienes, and lens growth 539
Light damage, classifications 10
Limbal
cells, migration 515
region, vasculature 677
Limbus, immunocompetent cells in 571
Lymphocytes, structure and function 556

Macrophages,
cornea, release of growth factors 522
structure and function 559
Macular
capillary distribution, retina 249
dystrophy 293
Major intrinsic protein (MIP), lens tissue 403
Mannose, as ligand for RPE receptor-mediated phagocytosis 157
Mast cells, structure and function 562
Microfilaments, cytoskeleton of RPE cells 136
Morphometric assessment, of retinal light damage 11
Müller cells
and neuronal interactions, in development 365
and neurotransmission 381
development of 365
retinoic acid synthesis 232–234
Murine conavirus model 90

Neurohistogenesis 365
Neuronal coupling, definitions 302
Neuropeptide-Y, in lacrimal gland 450
Neuropeptides 512
Non-retinal neurons, effect of *rd* mutation in mice 37
Noradrenaline see Norepinephrine
Norepinephrine, neurotransmitter in lacrimal gland 448

Ocular epithelium, and growth factors 500–514
Opsin,
molecular pathology 77–80
structure and function 67
Opthalmoscopy 595
Optic
nerve head, autoregulation of blood supply 595
neuropathy, glaucoma 594

Pars plana, vasculature 676
Peptide growth factor, protection against light damage 18
Peripheral capillary distribution, retina 252
Peripherin/rds 272
and photoreceptor outer segment 294
biochemical properties 272
cellular localization 280–283
cloning 274
immunochemical properties 272
interaction with rom-1 288
mutations, and retinal degenerative disease 291
primary structure 275
Phagocytosis 147–149
by macrophages 149–151
by retinal pigment epithelium 151–160
non-specific 148,149,151
of photoreceptor outer segment 147
receptor-mediated 148,149,151
C3 receptor 149

Fc receptor 149,152
mannose ligand 157
mannosylfucosyl receptor 150,152
rhodopsin ligand 158
β-glucan receptor 150
Phosphoinositide cycle, in lens 631
Photoreceptor
cell death 92 – 94
coupling 328
design, acuity, fly eye 180
outer segment,
and peripherin/rds 294
and rom-1 294
Physiological hypoxia, the concept 372
Platelet-derived growth factors 513
Polymethylmethacrylate, use in synthetic cornea 611
Prostaglandins, and lens growth 539
Protein components, lens tissue 403 – 407

Rapamycin 486
Retina,
as model for nervous tissue regeneration 199
mammalian,
electrical coupling 331
glial cells 358
junctional coupling 328
retinoid-oxidising enzymes 235
Retinal
angiogenesis 373
capillary distribution, clinical significance 257
degeneration,
in rds mouse 288
role of peripherin/rds 288 – 294
degeneration (rd) mice,
characteristics 288
circadian rhythm 39
morphology 38
physiological studies 39
origins 32
degeneration (rd) mouse,
disease, prevention studies 55 – 59
gene,
candidate cDNA 48
mutations 53
retina,
and cyclic AMP 42
and cyclic GMP 43
biochemistry 40 – 47
function 39
genetic studies 47 – 55
molecular biology 47 – 55
degenerative diseases, human, causes 291
light damage,
effects of essential fatty acids 18
effects of vitamins 17
environmental influences 8
features 4 – 10
genetic influences 6
history 2 – 4
irradiance 6
measurement of 10 – 16
mechanisms 17 – 23
model for human disorders 24
protection against 18
neurons, development of 365
pigment epithelium (RPE) 101 – 117
and drugs 104
and iron 104
and melanin 104
and metabolic by-products 105
and visible/UV light 103
antioxidant enzymes 107
cytoskeleton of 138 – 141
effect of *rd* mutation in mice 37
intermediate filaments in 126
keratins in 129
phagocytosis 151 – 160
oxidative stress 103
regeneration,
modes of 199
rotation cell culture 200
two mechanisms *in vitro* 220 – 223
vascular distribution,
cat 252
rat 252
vasculature 245 – 257
effect of *rd* mutation in mice 38
inner capilary layer 247
macular capillary distribution 249
outer capillary layer 249
peripheral capillary distribution 252
radial peripapillary capillaries 247
Retinaldehyde 235
Retinitis pigmentosa 66
autosomal dominant 291

Retinitis punctata albescens, autosomal dominant 292
Retinoblastoma-derived growth factor 514
Retinogenesis, *in vitro* scheme 222
Retinoic acid 231
  role in retina 237
  role in neural tissue 237
  stimulation of gene expression 232
  synthesis by brain 236
  synthesis by Müller cells 232
Retinoid
  oxidising enzymes 235
  transport 66
Retinol, oxidation 235
Retinospheroids,
  cellular differentiation 210–220
  types 200–210
Rhodopsin,
  as ligand for RPE receptor-mediated phagocytosis 158
  dephosphorylation, in rd mouse retina 45
  measurements, to assess light damage 15
Rod photoreceptors, effect of *rd* mutation in mice 33
Rodless (r) mice, origins 32
Rom-1 272
  and photoreceptor outer segment 294
  cloning 283
  immunocytochemical localization 288
  interaction with peripherin/rds 288

Scanning electon microscopy 244
Small heat shock proteins (hsps), and crystallins 413
Sodium channel expression, in type 1 astrocytes 380
Substance P, in lacrimal gland 450
Synaptogenesis, effect of *rd* mutation in mice 36

Tears, growth factors in 521
Tissue regeneration, in CNS 198
Tonometry 595
Toxic photoproducts 22
Trabecular meshwork, immunocompetent cells in 574
Transforming growth factor beta 513

Uveitis,
  experimental 487
    autoimmune 84
    use of immunophilin ligands 487
  genetic considerations 87
  refractory,
    use of FK506 491
    use of cyclosporine 490
  use of immunophilin ligands 486

Vasculature,
  choroidal 257
  ciliary processes 691
  iris 684
  limbal region 707
  pars plana 706
Vasoactive intestinal polypeptide, in lacriaml gland 448,453
Visual cell DNA, to assess light damage 15
Vitamin A 23
Vitreous humor, and growth factors 537
Vortex vein 264

Wound healing, in cornea 525–529
